Summer & Autumn 2022

WHEN PASSION GROWS SUCCESS.

ENTHUSIASTIC ABOUT QUALITY AND INNOVATION

ASICA Group B.V. stands for a selected range of fruit from our own production. What sets us apart from the rest? The DNA of an owner-managed company and our vertically structured organization. Access to all relevant components of the supply chain: with cultivation sites in Peru, the Dominican Republic, and Italy as well as efficient teams for logistics and distribution at the Port of Rotterdam and Karlsruhe Germany.

I hope to meet You in person at the 16th edition of Fresh Market B2B Meetings and Fair in Poland on 22 September 2022. You are most welcome and we look forward to seeing you there.

ARTUR STASIAK
CEO FRESH MARKET & KJOW

**FRESH
MARKET**

B2B MEETINGS & ADS

Dear All,

In post pandemic times, we face another horrible case – war. The invasion by Russian soldiers into Ukraine has resulted in the death and suffering of millions of innocent people, and has also affected the European market for fresh fruits and vegetables, especially in Central and Eastern Europe. We support our Ukrainian friends and all victims of the war. War is a topic that must not be missed.

To help you make business decisions in these tough times for the fresh market, we are pleased to present a Summer & Autumn 2022 edition of the branch catalog of fresh fruits & vegetables' suppliers to retail chains and distribution companies full of companies' profiles, products offers, direct contacts and interesting articles.

As always, we selected reliable partners with long-lasting experience in the production and sale of fresh fruits and vegetables as well as seeds and packaging services. We hope that the Catalog will make it easier for you to find the suppliers and products that meet your expectations in the upcoming season.

Our mission is to bring together the best suppliers from Europe, offer efficient networking and provide a knowledgeable source on current industry developments and innovations for all operators, buyers and professionals.

BACK IN REAL LIFE!

Save the date
22 September 2022
Warsaw, Poland

FRESH MARKET B2B meetings & fairs

– the most important event in the fresh fruits and vegetables industry in Central Europe is back on site again. Fresh Market annually gathers more than 350 company representatives. Participants will include market leaders from different countries, including producers and importers as well as distributors of fresh fruits, vegetables and flowers.

After a very tough two years for the entire fresh fruit & vegetable market and a break due to the Covid-19 pandemic, we are very happy to be back with 16th edition and meet you face to face again. On September 22, 2022 representatives of the largest producers, retail chains and stores will gather in the luxurious interiors of MCC Mazurkas Conference Centre & Hotel in near Warsaw. This is an event you cannot miss!

One day, many opportunities

Fresh Market B2B Meeting has been held every year for 14 years. The first event took place in 2008 in Poland and from the beginning it has become an excellent meeting place for fresh produce companies. That is why we know how to do it effectively. When you come to Fresh Market you will surely notice that this event is much different from other trade fairs or industry meetings. Why? Because the event formula has been developed based on the needs of buyers and suppliers of fruit, vegetables and flowers.

- ◆ hold face-to-face meetings with producers and retailers from Poland and Central Europe
- ◆ talk to hundreds of companies, exchange business cards, see the latest innovative products
- ◆ promote your products on stand, video presentation and banners

Fresh Market Award

Global promotion of the new products in the Polish market is our specialty! Each year we provide an award for the most innovative and interesting product of the year, it became a breakthrough in the sale of new products previously unknown to the industry.

The award is selected based on votes from Fresh Market website users and event attendees.

Become a participant of the biggest trade event in the fresh fruit and vegetable industry in Poland!

To become an exhibitor, participant, sponsor

Data Can Prevent Food Loss

Data insights on the fresh produce ripening/rotting process can minimize and even prevent losses along the supply chain.

Fresh produce is prone to ripening and rotting processes which can spread to other fruits and vegetables, ultimately causing losses for growers and importers/exporters along the supply chain. Introducing data is a promising avenue for reducing these losses as alerts can be sent at the beginning of the ripening/rotting process, allowing decision makers to sell potentially problematic produce first, before suffering any losses.

Existing tools for monitoring fresh produce across the supply chain are limited. The most common tools measure temperature, humidity and sometimes carbon dioxide (CO₂) and geolocation (in the case of transit and storage). However, this information doesn't tell much about the quality of the fresh produce. By adding data monitoring to the mix, the status of fresh produce can be monitored with greater control.

Oren Gavriely

CEO & Co-Founder of
NanoScent

nanoscent

To address this gap, NanoScent is developing the cutting-edge **VOCID® Cool Track** platform which can provide real time readings of gasses and volatile organic compounds (VOCs) associated with the ripening/rotting process. NanoScent has identified that the following **compounds signal the ripening/rotting process: ethylene, acetaldehyde, acetone, CO₂, and H₂O**. All of these can be measured at high sensitivity (at the PPM to PPB level) by **VOCID® Cool Track**, in addition to the standard parameters of temperature and humidity.

In the supply chain, data monitoring is most important for stages that take a lot of time. The two supply chain stages where **VOCID® Cool Track** can be most informative are the Primary Transport and the Cold Storage stages where produce can spend anywhere from weeks to months.

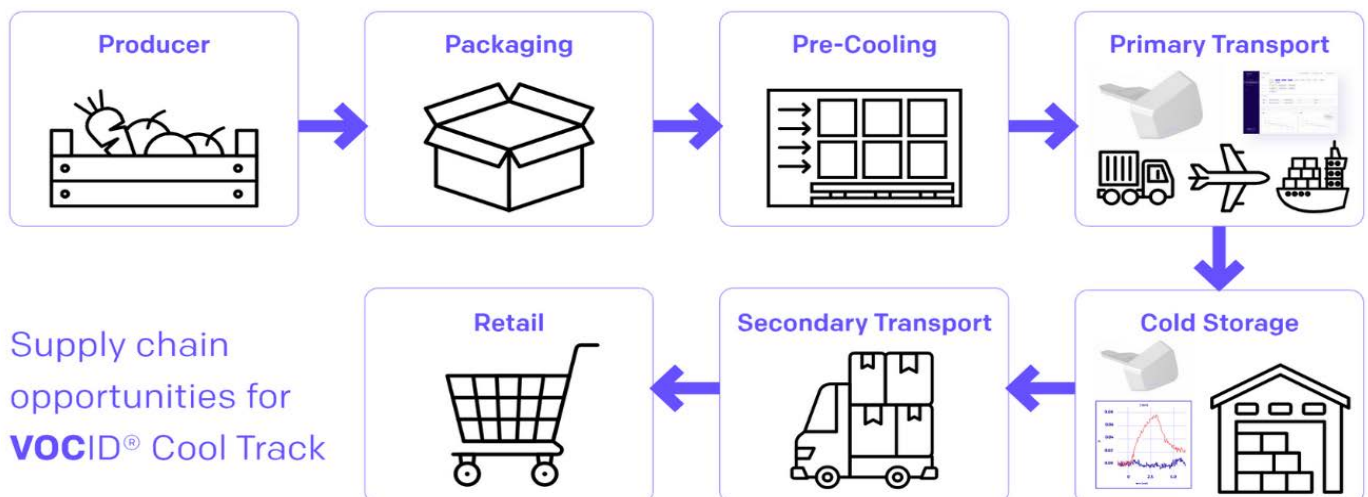

The VOCID[®] Cool Track device on a crate of avocados in a storage unit.

VOCID[®] Cool Track is a game changer for the fresh product industry because it will enable growers and importers/exporters to monitor produce states continuously as an all-in-one solution, ultimately saving precious resources, like time and money. By identifying and alerting to problematic produce, logistics and stock management can change accordingly to avoid food waste.

Currently, **VOCID[®] Cool Track** is in development with a special focus on avocados, potatoes, and apples. NanoScent is looking for design partners with clear needs to leverage the technology and express interest.

The supply chain process for fresh produce with **VOCID[®] Cool Track** being implemented in the transport and cold storage phases.

Avocado

FRESH ORGANIC AND CONVENTIONAL AVOCADO

Asica offers you year-round avocados from our own cultivation in Peru and from our worldwide partner network. Besides the Hass avocado, you can also get Greenskin varieties such as Fuerte, Pinkerton or Ettinger if required. A speciality are our large caliber Tropical Avocados, which we get from October to March from the Dominican Republic. On our process-integrated coating machine, we can treat the fruit at the customer's request to extend its shelf life.

HALLS IS A MEMBER OF THE HL HALL & SONS GROUP

Your trusted global avocado supplier

Family-owned and purpose-driven, Halls is a global fresh produce supplier with sustainability at its core.

Halls BV

The Halls journey began in 1890 by a family with a purpose to build a fresh produce business of integrity and are still as passionate about growing and caring for their people and partners as they are about growing and caring for their produce. Community initiatives and farming practices, which aim to respect and conserve the environment for future generations, have been a part of their DNA from the very beginning. The commitment to bring customers, who have always remained at the heart of the business, along this fruitful journey with them remains as strong as ever.

Halls maintain a firm foundation in farming, with over 1200ha of orchards under management and are active across the complete fresh produce value chain from a tree nursery to growing, sourcing, packing, ripening, distribution, through to the marketing of quality sub-tropical fruits.

Halls operate in seven countries, with annual sales of more than 6.5 million cartons of avocado across 28 countries. Halls are known as an avocado specialist but also offer an expanded range that includes mango, litchi, lime and pecan, with an increasing variety of other sub-tropical exotics and associated product lines joining the portfolio.

Halls operate in seven countries, with annual sales of more than 6.5 million cartons of avocado across 28 countries. Halls are known as an avocado specialist but also offer an expanded range that includes mango, litchi, lime and pecan, with an increasing variety of other sub-tropical exotics and associated product lines joining the portfolio.

Halls strive to continually service clients with fruit that has been meticulously selected via AWETA sorting technology, allowing informed decisions regarding the individual fruit pressures, weights and overall external appearance to pack a final product that satisfies clients' specifications. In addition, Halls supply a range of net and punnetted packaging formats to cater for all consumers' needs. Halls offer plastic free products, that are ethically sourced on a year round basis.

Built on a foundation of family values and with a view to nurturing long-term partnerships with all stakeholders, Halls continue to seek ways to exceed expectations and align with their own aspirational goals of reaching scale through a smart | global | sustainable future, where Halls, their growers and customers work together to make sure every piece of fruit matters.

Do not hesitate to reach out and contact us for more information!

Blueberries

Improved blueberry varieties making significant strides

An exciting range of new low-chill blueberry varieties launched last year are now being more widely planted in Europe and Morocco.

Plants
Quality & Service all year round

Stefan Belakov

Director

Plants365 Ltd

Plants365, a nursery business based in the UK, and with production in the EU, is licenced for these new low-chill cultivars across Greater Europe and North Africa. Bred at the University of Georgia in the USA, the varieties Early Duchess, Maverick, Gladiator, Ava and Ambrosia are bearing fruits in the EU as well as in Morocco. In addition to the Early Duchess, Maverick, Gladiator and Ava varieties, Sweet Duchess is also available in both Kazakhstan and Georgia.

Commenting on these developments, Stefan Belakov, director of Plants365 stated, “with the recent changes to travel restrictions, I’ve been able to visit both commercial and testing sites planted with these blueberry varieties. Along with the growers, I’ve been very excited to see and taste these excellent cultivars. The blueberry market in terms of new varieties is changing rapidly at the moment as the sector is demanding an increasingly performant eating experience. These varieties do deliver consistently large, firm and sweet berries. As a result, we are seeing a significant demand for plants to be planted in the next two years.”

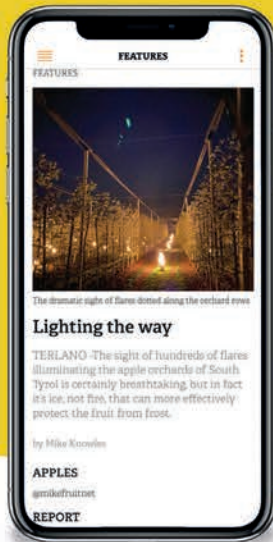

Already widely planted in other parts of the world, varieties such as Maverick, Sweet Duchess, Gladiator and Early Duchess are showing the same improved characteristics in terms of fruit quality and yields in Europe and Northern Africa.

Belakov continued, “as well as exciting feedback from growers, we are receiving encouraging reports from retailers and produce marketing businesses. From this, we see strong opportunities to market some of the cultivars in this range within premium lines. Size and firmness are taken as “givens” these days when it comes to the new blueberry genetics, but the point of difference that we are able to offer is the improved flavour profile, in conjunction.”

As the company increases plant numbers over the next few years, expect to see more and more fruit on retailers’ shelves accordingly.

Premium Quality Table Grapes from India

We supply to leading supermarkets in Europe, UK & South East Asia. We stand proud with 2 State of the art Packing Houses in Maharashtra which is the major Grape Growing Region!

Nidhi Agrawal

Executive Manager
Euro Fruits India

"In my last couple of Seasons, I can only see the Containers getting shipped from India increasing and no Grape Season is ever the same! No amount of experience is enough in this industry since every Grape Season has its own Challenges making it worthwhile and interesting to work towards! Halls maintain a firm foundation in farming, with over 1200ha of orchards under management and are active across the complete fresh produce value chain from a tree nursery to growing, sourcing, packing, ripening, distribution, through to the marketing of quality sub-tropical fruits."

Euro Fruits is a woman driven company and women power run and control all our Packing operation and farm activities! We implement United Nations Gender equity seal standard in which both Men and Women get paid at par - we don't discriminate between the two.

Primary Health and Education has been Euro Fruits core area of CSR and we are very happy to have helped.

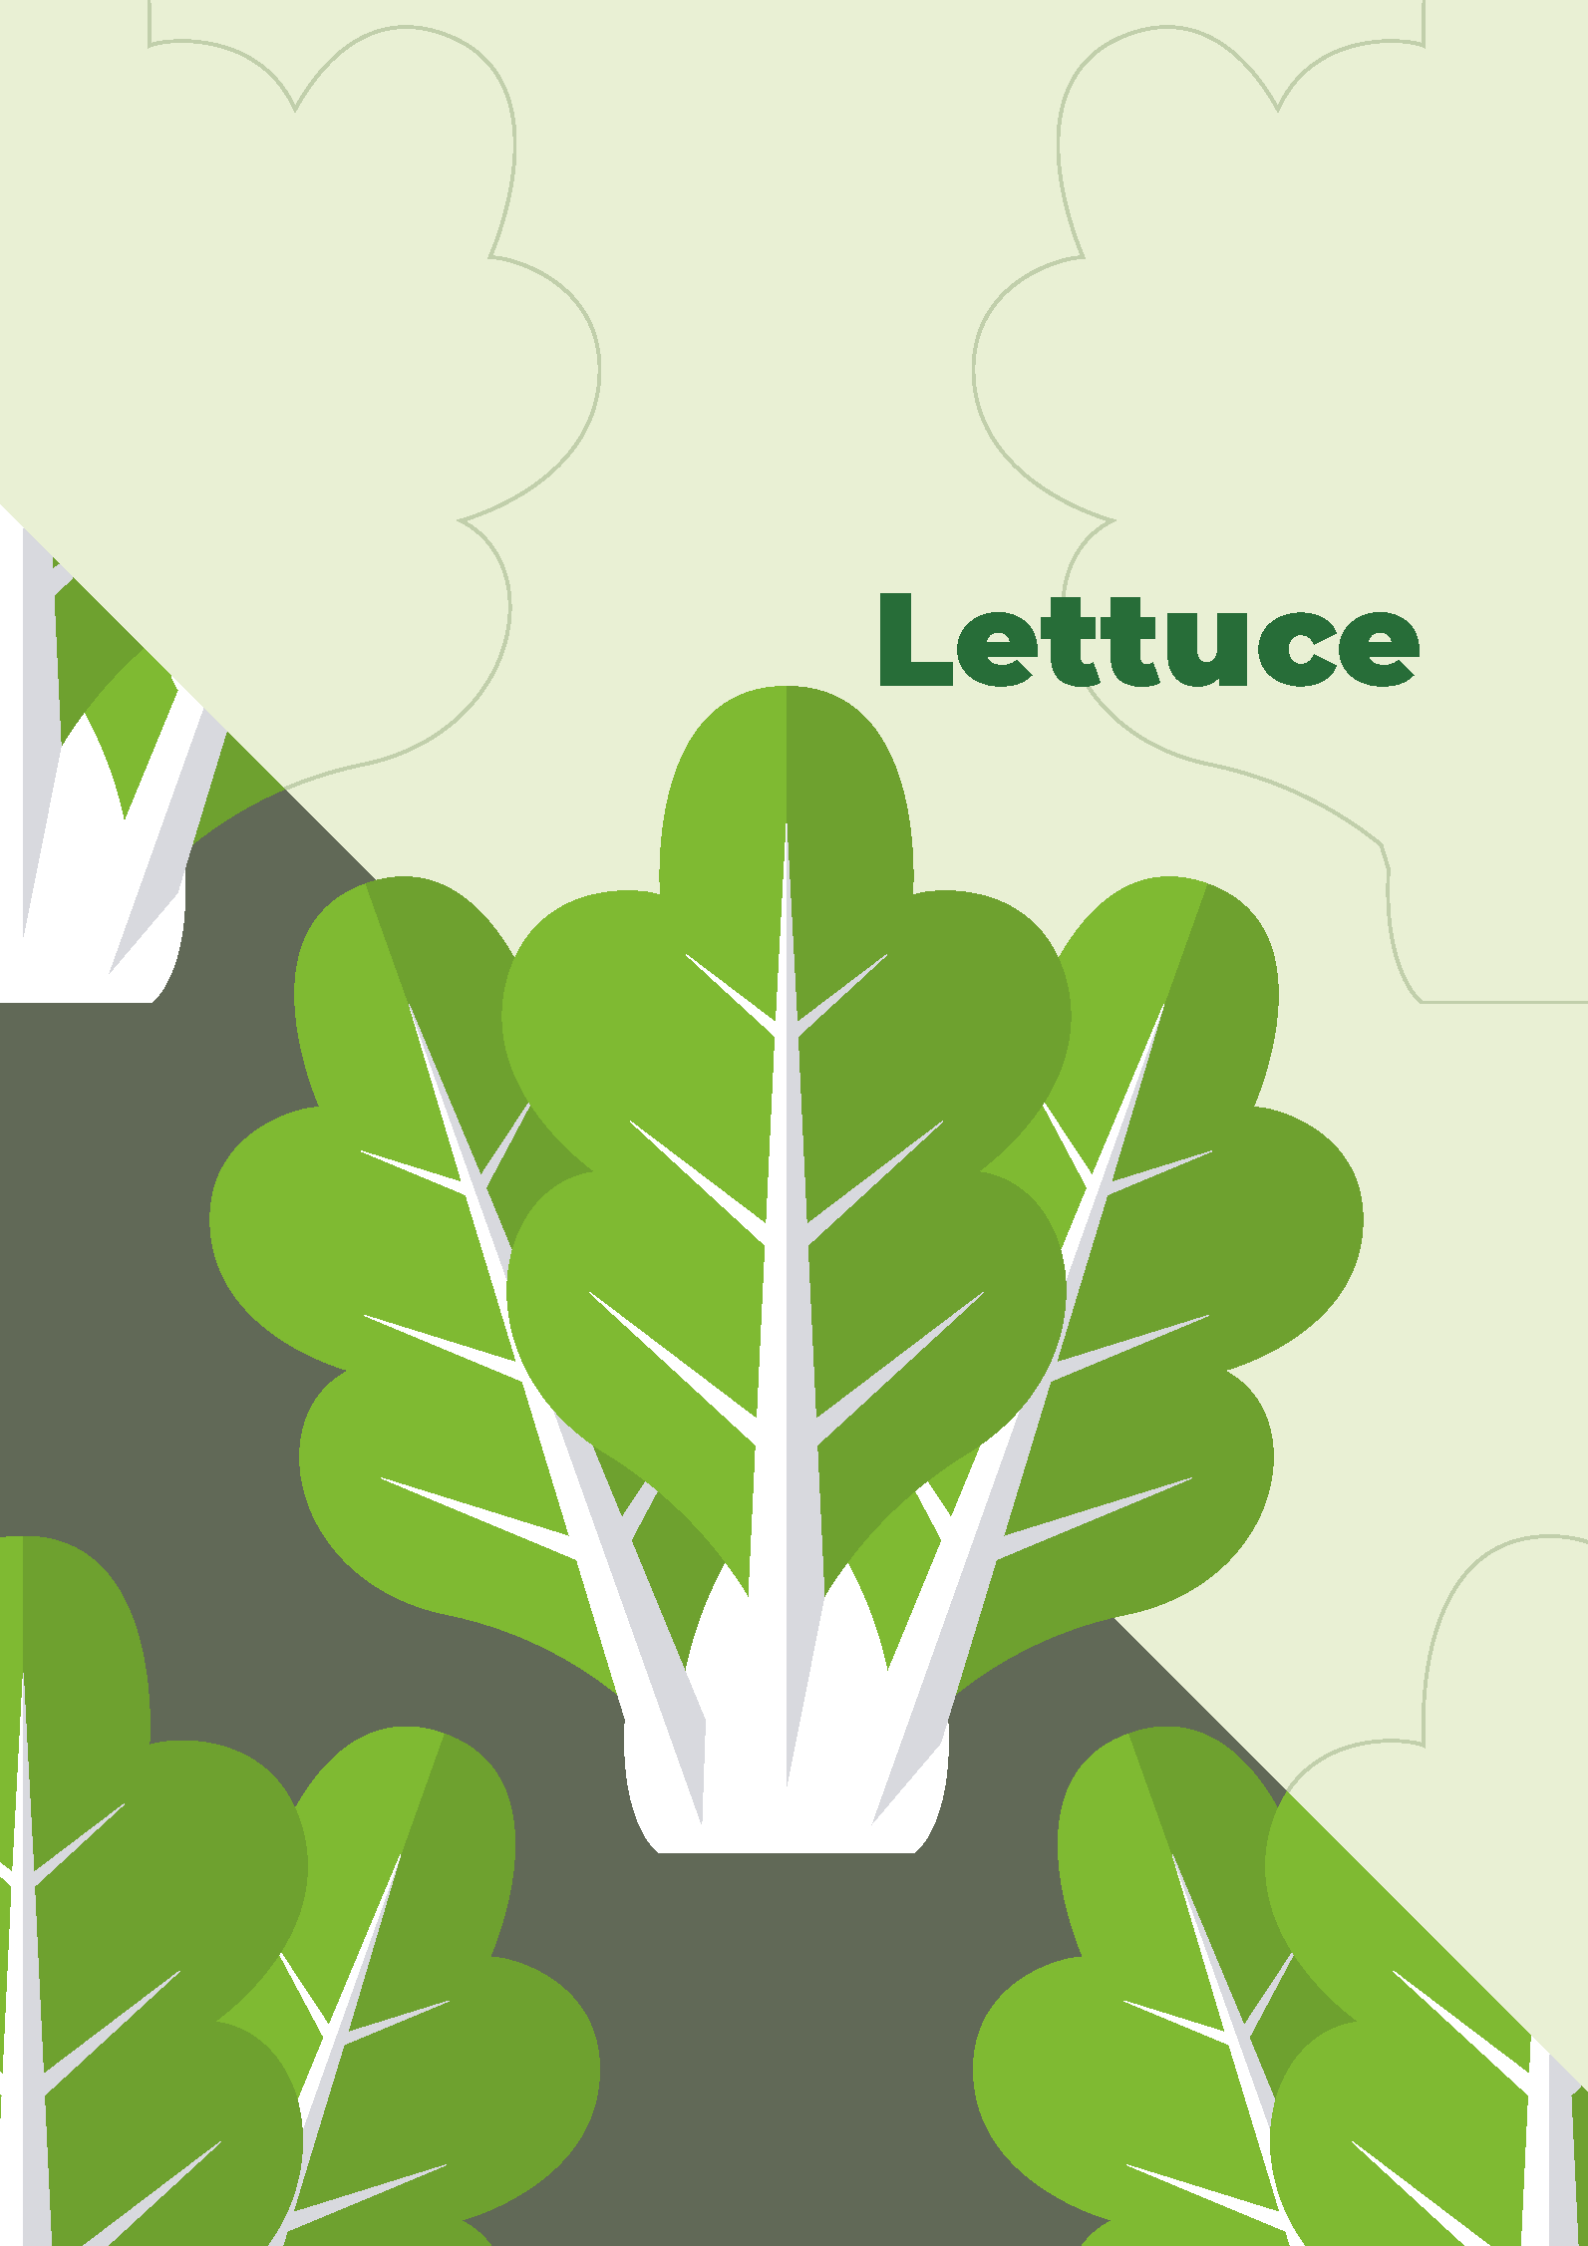

Various Food Safety Certificates such as Global GAP, GROW, BRC, SMETA, Fairtrade makes us one of the leading Grape Exporters from India! We lay high importance and are committed to ensure that food safety is implemented and maintained throughout our production processes.

Euro Fruits is also focused on Plastic Usage Reduction at our Pack House, Fields and also in our everyday life.

We are happy to inform you that we now have successfully wrapped up Season 2022. The new harvest areas around Nasik and Sangli, made this our longest ever Grape Season! This also is our 30th Grape Season and we now happily celebrate!

PROMINENT

High-quality and healthy options at a low price

Due to the current inflation, consumers have less money to spend. In addition, the geopolitical unrest results in more expensive raw materials, which further increases the prices in supermarkets. Therefore, consumers switch between supermarkets more often. How can retailers make sure that their customers keep coming back?

Wim van den Berg

Marketing manager

Growers United

Switching between supermarkets for current offers

These days, consumers often make a detour for current offers: at one retailer they purchase their baked and dry goods for example, while at the next their fresh fruit and vegetables and at yet another their dairy products, meat, or meat substitutes. But once consumers have found their way to the competition, it proves difficult to get them back. Therefore, retailers give it their all to retain (keep) their customers.

Halls maintain a firm foundation in farming, with over 1200ha of orchards under management and are active across the complete fresh produce value chain from a tree nursery to growing, sourcing, packing, ripening, distribution, through to the marketing of quality sub-tropical fruits.

Fresh fruit and vegetables are more healthy but less expensive

How can retailers stimulate consumers to keep purchasing high-quality and healthy options, but at a lower price?

Fresh produce, like tomatoes, is a great choice when cooking a tasty meal. In general, unprocessed products are healthier than processed food, as they do not contain unnecessary additives. Also, fresh produce is often less expensive. And when you start cooking yourself, you have a better understanding of the ingredients you need. This leads to less waste and less costs, while you create a delicious dish at the same time.

Retailers can help consumers with this. Stimulating and inspiring them with quick and healthy recipes for example. Many consumers may have chosen convenience before, but this trend has been reversed by the covid-19 pandemic and the current inflation. Due to the increasing prices, even more people get busy in the kitchen to cook their own fabulous food.

Do you choose convenience food, or do you get busy yourself?

Why purchase a ready-made pasta sauce when you can also create a speedy sauce using fresh tomatoes? You can keep a check on high-quality and healthy ingredients, while fresh produce often costs less too.

The same applies to the snacks you give your kids (to school). Do you grab a prepacked bar or crisps? Or do you fill a container with snacking tomatoes? Not only is a bar or packet of crisps a less healthy option, as it is a processed product, but soaring costs of raw materials increase their prices too.

Through stimulating and inspiring consumers with recipes, videos, and information in their apps, retailers can encourage consumers to keep coming back. It also shows that you can create affordable and – just as important – tasty treats, using fresh produce. Not only great for your budget, but great for your health too.

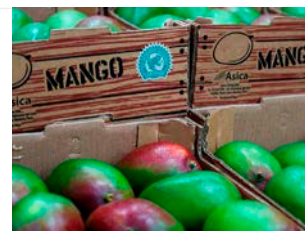

Growers United / Prominent has been stimulating consumers with inspiring campaigns for many years. Curious to know more about our healthy and affordable solutions? Do not hesitate to get in touch with Wim van den Berg of Growers United / Prominent: w.vandenberg@growersunited.nl or +31 (0)6 5756 4346.

Taste on the first place!

Sakata offers premium customer service, comprehensive support and superior products. Sakata Seed has been innovating for over 100 years, providing the finest vegetable varieties curated from our world-renowned breeding programs. We distribute our seed via wholesale dealers throughout the all world. From seed packets and controlled agriculture environments to farm, Sakata are sure to garner rave reviews. Our goal is to be your supplier of choice, and we look forward to serving you in the seasons ahead.

Sakata continuously increases its R&D investments in EMEA (Europe, Middle East and Africa) to select the best vegetable varieties to meet its customers' expectations. When developing new genetics Sakata's teams always have in mind the needs and constraints of their stakeholders: distributors, growers, nurseries, retailers and final consumers.

The best example is Broccoli, a crop for which Sakata has acquired leadership on a worldwide scale, creating new types with significant health qualities and adapted to a diversity of cultivated areas. Sakata's expertise in innovation is also evident in our range of tomato varieties, with flavour quality being a key concern for the Sakata Research teams. The current achievements and success of Sakata are the result of a combination of our history that started in 1913 in Japan and in 1996 in EMEA, and of our core values derived from Sakata's Japanese roots.

Sakata portfolio offer high quality vegetables with excellent taste!

Sakata has in portfolio a unique variety tomato Rihanna F1-large-fruited cherry with multiple market options. Fruits are globe-shaped, have a beautiful deep pink tone, smooth texture and an excellent rich flavour. Fruits weigh around . 20 to 30 grams. Excelent taste with very good shelf life is a perfect combination. This tomatos every year more I more popular around Europe market like a unique product in tomatos range.

Butternut squash is one of the most common varieties of winter squash. It also offers a good supply of vitamin A, potassium, and fiber. Contrary to the name, winter squash is grown in the summer and harvested in the fall. It's thick, tough exterior and firm flesh make it suitable for storing over several months. This means it can be eaten during the winter season.

Fast facts about butternut squash:

- Butternut squash, or winter squash, is harvested in the fall but it keeps well for several months.
- It is a good source of fiber, potassium, and several other key nutrients.
- The nutritional content of squash makes it beneficial for digestion, blood pressure, and for healthy skin and hair, increase energy, and contribute to a healthy weight.
- Squash can enhance or form the basis of a range of sweet and savoury dishes.

Sakata in portfolio has wide range of squashes - with excellent variety dedicated for Europe market - **Mieluna F1**. Butternut with perfect, uniform market size 1-1.2 kg and excelent shelf life. Perfect product for market shelf and easy to grow. Mieluna F1 has excelent taste peanuts shape, tan skin colour with dark orange flesh colour and high internal quality.
